Center Valley, PA and Toronto, ON | U.S.-Canadian dual citizen | No sponsorship required
Available full-time May - August 2027 in the U.S. or Canada

EDUCATION

University of Toronto

Toronto, ON

Faculty of Arts & Science - Mathematical & Physical Sciences; intended Mathematics and Statistics Expected May 2030

Relevant Coursework: Data Structures (dual enrollment), AP Computer Science A, AP Calculus BC, AP Physics C

SELECTED PROJECTS

Aesthetics AI | [App Store](#) | [Case Study](#) | *React Native, Expo, Supabase, RevenueCat*

May 2026 - Present

- Shipped an **iOS fitness app** with AI photo reports, training plans, progress tracking, and subscriptions; built the React Native client and Supabase/PostgreSQL backend.
- Implemented and tested workout saves that persist before cloud sync and commit workouts and exercise sets atomically; verified **restart recovery, rollback, and isolation between accounts**.

CallReclaim | [Demo](#) | [Case Study](#) | *Next.js, PostgreSQL, Twilio/Telnyx*

Jul 2026 - Present

- Built a **missed-call recovery MVP for service businesses**, connecting consent-aware SMS and AI lead extraction to an owner dashboard; authenticated provider webhooks and restricted data access by owner.
- Implemented callback-based recovery when an SMS provider accepts a send but the app loses its response; validated atomic PostgreSQL reconciliation under **concurrent callbacks and worker crashes** without automatic resends.

Agent Eval Mutation Lab | [GitHub](#) | *Python, Inspect, Docker, SQLite*

Aug 2026

- Built a typed **Python evaluation engine** for **104 deterministic tasks**, with answer keys withheld from scorer inputs, transactional SQLite recovery, and reproducible evidence across execution schedules.
- Integrated **Docker-isolated Inspect tools** with an independent SQLite effect scorer; detected committed-write errors and publish-then-revoke faults in controlled tests, and completed a frozen **24-run Qwen tool-use evaluation**.

OPEN SOURCE

Microsoft Agent Lightning & Inspect Scout | Merged PRs [#580](#), [#582](#), [#586](#)

Aug - Sep 2026

- Contributed two merged **Python controller fixes** to Microsoft Agent Lightning: prevented queued rollout admission during shutdown and honored configured agent-facing URLs for local workers.
- Corrected per-item model-usage accounting in Inspect Scout; added caller-visible regressions across all three PRs, which passed applicable upstream tests, typing, lint, and build checks.

LEADERSHIP & COMMUNITY

Feeding the Valley | *Vice President*

2025 - 2026

- Led **60+ student volunteers**, raised **\$20K**, and helped prepare **1,700 meals** for local food banks.

FIRST Robotics Team 834 | *Fundraising Lead*

2022 - 2026

- Raised **\$5K+**, reached **2,000+ prospects**, and mentored **7+ members**; the team qualified twice for the FIRST World Championship.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

Python, ML & Testing: PyTorch, NumPy, Inspect, pytest, mypy, uv, SQLite, GitHub Actions

Product & Data: React, React Native, Expo, Next.js, Node.js, Supabase, PostgreSQL, Deno

APIs & Deployment: Structured LLM APIs, Twilio Voice/SMS, RevenueCat, Docker, EAS/TestFlight, Vercel
